

**KEYPOINT TECHNOLOGIES (KPT) SUPPORTS SPONSORSHIP OF THE
SYMBIAN EXCHANGE & EXPOSITION (SEE) 2009 WITH THE BETA
RELEASE OF THE SEE 2009 PROFESSIONAL DICTIONARY FOR NOKIA
S60 SMARTPHONES**

Wednesday, 21 October 2009 – KeyPoint Technologies (UK) Ltd. (KPT) has released a Beta Version of Adaptxt predictive text software for Nokia S60 Smartphones that includes a SEE 2009 professional dictionary. The SEE 2009 dictionary gives visitors to the show predictive text with Symbian related predictions: mobile IT and telecoms acronyms, industry terminology, location information, and Symbian show related words are stored in the Adaptxt Personal Dictionary enabling predictions that are highly relevant for users sending messages at the show.

The SEE 2009 dictionary is a *free* introduction to the portfolio of Professional AddOn Dictionaries that Adaptxt users can download. IT&Telco, Finance, Business, Legal and Medical dictionaries are available in various European languages; these professional dictionaries include words specific to that industry which are *not* found in a standard language dictionary. Combined with Adaptxt *Language Intelligence*, apposite predictions enable business users to send well composed email and text messages from their smartphone.

By offering a free Dictionary at the show, KPT is demonstrating the future of Predictive Text. Sanjay Patel, CEO and Founder of KPT says “Users should be able to update their predictive text Over-the-Air (OTA). AddOn Language dictionaries can obviously benefit all users but Professionals who want a productive, positive text entry experience can enjoy industry specific word predictions by installing a Professional Dictionary and be able to author complex correspondences whether by email, blogs, or social messaging”.

The SEE 2009 dictionary will predict presentation titles, speaker names, company names and anything to do with SEE 2009 including the names of streets, transport links, bars, restaurants and hotels in the Earls Court area.

Patel continues “users with Nokia 12 key smartphones can download Adaptxt with the SEE 2009 dictionary. They just need to visit the mobile site on their phone: **see.adaptxt.com**”.

KPT are demonstrating the latest version of Adaptxt for Nokia smartphones on Stand 3 (near the front door) at the Symbian Exchange & Exposition, Earls Court 27 & 28 October 2009.

About Adaptxt

Adaptxt is intelligent language software which is embedded into smartphones. Adaptxt software components include a Language Engine which learns the unique writing style of the user, a dynamic Personal Dictionary which stores the user’s personal words and context the Adaptxt Think Ahead™ UI which suggests apposite words in advance so the user can select entire words (as opposed to typing them) to maximise keystrokes reduction

Adaptxt Professional dictionaries are part of a wider AddOns portfolio including 24 different languages that can be downloaded OTA. Adaptxt software is embedded on the HP iPAQ Voice Messenger and is available for download at www.adaptxt.com/supersonic for Nokia S60 devices (Symbian S60 3rd edition, v9). Supported devices include: Nokia N96, N95, N93i, N93, N92, N91, N81, N80, N77, N76, N75, N73, N71, E65, E60, E50, 6290, 6121, 6120, 6110, 5700, 5500, 3250, N95-8GB, N81-8GB, E66, N79, N83, E51, N78.

About KeyPoint Technologies UK (Ltd.)

KeyPoint Technologies’ (KPT) mission is to make communication devices more accessible. Their product, Adaptxt, sets a new standard in next generation assistive input software. Adaptxt for Handheld, Smartphone and Desktop devices uses proprietary pattern recognition to make text entry fast, natural and efficient. Adaptxt learns in real-time and understands context, grammar and semantics offering a superior language based input solution.
